CROSSLINE LASER CROSSLINE

The powerful crossline laser for interior fittings

Laser professionals expect a lot from a cross-line laser. Quite right, says SOLA, in bringing to market its powerful CROSSLINE tool, created for indoor and outdoor use. Optimum laser beam visibility and a range of up to 80 metres are what make CROSSLINE a valuable addition to the SOLA laser range.

The biggest application range in its field

Visibility is a critical issue on many construction sites. SOLA has tackled this issue and added the CROSSLINE laser to its laser range. The newcomer from the traditional Austrian-based brand is impressive in its excellent laser beam visibility.

Improved laser brightness

In understanding the challenges facing professional craftsmen, day in, day out, Lukas Zwing explains that "poor lighting conditions often pose a problem. Nevertheless, work needs to be precise." "That is why we have paid particular attention to laser brightness with the CROSSLINE. The result is plain to see," adds an enthusiastic Innovation Manager at SOLA.

High precision for a range of applications

Whether working indoors or outdoors, high precision levelling is made possible with the new crossline laser, with a noticeably low measurement tolerance of a maximum of 0.2 mm/m. Its high degree of accuracy means that CROSSLINE makes a range of tasks easier, from furniture and exhibition construction to laying tiles and floors.

Spot-on in any position

The practical swivel base on which the device is mounted makes operation even easier. A turn of the wrist is all it takes to point the CROSSLINE in any direction, with no need to move its position. An inclination wedge is available as an option, which makes the crossline laser an even more practical tool for all types of work involving slopes, such as staircase construction, roof construction and wall mounting.

A distance of up to 80 meters

A hand-held receiver enables the CROSSLINE to be used for greater distances of up to 80 meters, giving this crossline laser the biggest range in its field. Ideal for large rooms or outdoor use.

Innovative SOLA Li-Ion battery technology

Anyone wanting to extend the already long operating time of up to 30 hours can upgrade the CROSSLINE with the latest SOLA Li-ion battery technology. In addition to short charging times and greater operational availability of up to 45 hours non-stop, the SOLA Li-ion battery ensures optimal charging management and thus particularly long life. This ensures full power until the moment the battery is fully discharged.

Robust construction site professional

The CROSSLINE laser, in its distinctive SOLA-red soft grip housing, is ready for the toughest use on any construction site. Safely stowed in a practical case, this laser innovation from SOLA is available from professional retailers. A wide range of high-quality accessories, such as e.g. the hand-held receiver completes the attractive package for demanding craftsmen.

For more than 60 years our SOLA brand marks perfect precision measuring tools. As experts on measuring and marking we manufacture a wide range of products supporting craftsmen on construction sites. It is our approach to develop and continuously optimize our products as close as possible to our customers' requirements.

Characterized by consistent simplicity, efficiency and precision SOLA innovations are setting the standard in many applications from civil engineering to interior construction. As the Austrian market leader in premium spirit levels we provide a versatile product range, including rules, screeding levels, long and short tapes, squares, marking products, laser distance meters and a customized laser program.
