## **VECTOR 40 & 80**

### **Laser distance meters VECTOR 40 and VECTOR 80**

The first question that SOLA faced was: can we develop the right laser distance meters to meet every challenge? The answer is yes! With the VECTOR 40 and VECTOR 80, SOLA has brought two own laser distance meters to the market for the first time, enabling efficient completion of the applications most frequently executed by professional craftspeople.

#### **High user orientation – handy design**

Both laser devices are equipped with a range of functions, yet are exceptionally easy to use. “Intuitive ease of use is a key feature of SOLA laser products,” explains Michael Scherrer, Product Manager at SOLA. “We wanted the VECTOR 40 and VECTOR 80 to be even easier for our customers to use than before.”

#### **Intuitive operation**

This was a success right from the start, because operation of both laser distance meters only requires one free hand. Large buttons and a clear display make orientation quick and easy. These features are clearly another advantage when working in poor light and when wearing protective gloves.

#### **A number of practical measuring functions**

The frequently used measuring functions, such as length and area measurement, can be accessed at the touch of a button. A clear display ensures easy navigation through other function levels and settings.

#### **VECTOR 40 for quick and easy use**

So what is the difference between the VECTOR 40 and the VECTOR 80? The VECTOR 40 has been specially developed to be quick to use in day-to-day work, with no previous knowledge of working with laser distance meters required. The measuring function is practically self-explanatory and available as soon as the device is switched on. Craftsmen in different trades can efficiently measure distances between two points, calculate areas or use the indirect 3-point measurement to calculate inaccessible areas.

#### **VECTOR 80 for demanding tasks**

Anyone needing assistance for more complex measuring tasks should reach for the VECTOR 80: this practical device in SOLA's laser distance meter toolkit combines vital functions for various trades. The VECTOR 80 enables indirect 2-point, as well as 3-point, measurement. The device also incorporates basic arithmetic operations and can calculate volumes. Up to 20 results can be stored in an integrated data logger.

#### **Laser technology**

SOLA developed its new VECTOR range at its production site at Götzis, in the Austrian state of Vorarlberg. Both laser models are available now from specialist professional retailers. Practical accessories, such as laser goggles and targets, are also available.

For more than 60 years our SOLA brand marks perfect precision measuring tools. As experts on measuring and marking we manufacture a wide range of products supporting craftsmen on construction sites. It is our approach to develop and continuously optimize our products as close as possible to our customers' requirements.

Characterized by consistent simplicity, efficiency and precision SOLA innovations are setting the standard in many applications from civil engineering to interior construction. As the Austrian market leader in premium spirit levels we provide a versatile product range, including rules, screeding levels, long and short tapes, squares, marking products, laser distance meters and a customized laser program.
