PLANO 3D / 360° LINE LASER

THE 360° LINE LASER FOR QUICK AND ACCURATE RESULTS

The PLANO 3D from Sola stands out from the crowd with its compact design and ease of use, allowing work to be carried out quickly and with an incredibly low measuring tolerance.

A real all-rounder that's easy to operate

The PLANO 3D projects one horizontal and two vertical 360° lines with a measuring tolerance of just 0.20 mm per metre. The laser is ready for use in just a few steps. Simply set it up, switch it on, and the laser instantly projects accurate lines in any space. Each laser line can be switched on individually at the touch of a button, enabling a whole range of new applications for simultaneous marking, alignment and levelling.

Efficient drywall and interior construction

The PLANO 3D makes work not only more precise, but also more convenient, offering huge time savings. It also ensures outstanding measurement accuracy on all sides for a full 360° coverage.

Precise at a 90° angle

Together with the horizontal 360° laser line, the vertical lines form a 90° angle to create a wall, ceiling or floor cross wherever they intersect. The precise 90° angle facilitates perfect alignment when installing equipment and furniture. It is also a useful tool for assembly work, such as building walls and suspending ceilings.

Fast working, accurate results

Plumbing can be carried out precisely with the help of the floor and ceiling cross. This allows measuring points to be transferred for projects such as installing spotlights or ceiling panels.

Extensive range, robust design

The PLANO 3D makes use of a hand-held receiver to create laser lines with a range of up to 80 metres.

What's more, the robust housing of the PLANO 3D protects against splashes and dust to meet the requirements of protection class IP54.

The SOLA brand stands for perfect measuring tools. As experts in measuring and marking, we have manufactured a wide range of products for more than 60 years, providing tradespeople with the support they need on the construction site. Our approach is to continually develop and optimise our products so that they best meet our customers' needs.

Product innovations from the SOLA brand are characterised by consistent simplicity, efficiency and precision. They have enabled us to set standards in a wide range of applications for many years, from civil engineering to interior construction. As the Austrian market leader for premium spirit levels, we offer an extensive range of products, including metre rules, screeding levels, tapes, squares, marking products, laser distance meters and a customised laser programme.
